The screenshot shows the 'Utilities' section of a Twistlock interface. On the left, a sidebar contains 'Defend', 'Monitor', and 'Manage' (highlighted with a red box), with 'System' as a sub-option. The main content area is titled 'Utilities' and includes a 'General utilities' section with links for 'Jenkins plugin' and 'OpenAPI Spec (Beta)'. Below this is a section for the 'twistcli tool' (highlighted with a red box), which lists download links for Linux x86_64, Linux ARM64, macOS x86_64, macOS ARM64, and Windows platforms. At the bottom, an 'API token' section shows 'Token details' with a token string (highlighted with a red box) and 'Token valid until' set to May 11, 2026, 12:01:32 PM.

For Mac, copy the command based on your OS environment and run it in the CLI.
